

Login to matrix and create a file called "quiz.txt".

Answer the following questions and when done enter the following command:

~fardad.soleimanloo/submit oopq3 <ENTER>

Quiz3:

Create a class module called Employee that encapsulates an Employee with a Name and an employee number.

Create Setters and Getters for the m_name and m_empo (employee number) attributes of the class.

Create a display method that displays an employee whose name is "John Doe" with employee number "123456789" as follows:

> John Doe, 123456789<NEWLINE><

When answering the question, for each part of code write the filenames in which the code should reside.

Employee Class usage demo : (EmpoyeeTester.cpp)

```
#include "Employee.h"
int main() {
    Employee E;
    E.name("John Doe");
    E.stno(123456789);
    E.display();
    return 0;
}
```
