Login to matrix and create a file called "quiz.txt".

Answer the following questions and when done enter the following command:

~fardad.soleimanloo/submit oopq3 <ENTER>

Quiz3:

Create a class module called Student that encapsulates a Student with a Name and a Student number.

Create Setters and Getters for the m_name and m_stno (student number) attributes of the class.

Create a display method that displays a student whose name is "John Doe" with student number "123456789" as follows:

> John Doe, 123456789<NEWLINE><

When answering the question, for each part of code write the filenames in which the code should reside.

Student Class usage demo : (StudentTester)

```cpp
#include "Student.h"
int main() {
    Student S;
    S.name("John Doe");
    S.stno(123456789);
    S.display();
    return 0;
}
```
